- GitHub - <https://github.com/yinnieinhtwe/dailysuite>

UNLOCKING CAFE SALES WITH DATA VISUALIZATION

Data Mining and Warehousing Project

- Analyzed transaction records to identify sales trends and customer behavior
- Created dashboards and visual reports (charts, graphs, KPIs)
- Applied Naïve Bayes for pattern analysis and insights generation
- Tools: Power BI, Data Mining Techniques

Tour and Travel Booking Management System

Design and Architecture of UML Project

- Built a UML-based platform for booking tours, flights, hotels, and transportation.
- Integrated secure payments, automated notifications, and travel agency package management.
- Added features for local tours, guides, and additional travel services.

YBS Bus Tracking Management System

Database Transactions Management Project

- Developed a MySQL-based system to track buses in real time with estimated arrival times and route details.
- Implemented user management (add/update/delete users, change password) and driver age verification.
- Designed ER diagrams, created tables, and supported queries for buses, routes, and upcoming stops.
